Factors and levels of the fatigue test programme (MIM Ti-6Al-7Nb)

Factor	Level 1	Level 2	Level 3
Powder	TiH_2-derived	HDH	gas-atomised
Specimen geometry	round bar	flat	notched
Space-holder content	0 vol%	15 vol%	30 vol%
Oxygen content	0.15 wt%	0.30 wt%	0.45 wt%
Load ratio R	-1	0.1	0.5
Environment	laboratory air	Ringer's solution	Ringer's, H-charged

Level combinations that are not available

Level of one factor	Level of another factor
Powder = TiH_2-derived	Specimen geometry = round bar
Powder = TiH_2-derived	Space-holder content = 0 vol%
Powder = TiH_2-derived	Oxygen content = 0.45 wt%
Powder = TiH_2-derived	Environment = Ringer's solution
Powder = HDH	Specimen geometry = notched
Specimen geometry = flat	Load ratio $R = -1$
Space-holder content = 0 vol%	Oxygen content = 0.15 wt%
Space-holder content = 15 vol%	Load ratio R = 0.5
Oxygen content = 0.30 wt%	Environment = laboratory air
Oxygen content = 0.45 wt%	Environment = Ringer's solution
